EDUCATION

University of Saskatchewan, Saskatoon, SK, Canada

July 2021 – Apr 2026

Bachelor of Science– Computer Science

PROJECTS

EvidenceAI - AI – Powered Technical Portfolio Assistant (In Progress)

Python , FastAPI, Langchain , OpenAI- API, ChromaDB , Git

- Building a Retrieval-Augmented Generation (RAG) engineering assistant that answers technical questions by retrieving relevant evidence from an indexed database and presenting supporting evidence.
- Generated in-depth project summaries using Repomix and LLM with custom prompting; populated ChromaDB with vector embeddings using hybrid chunking. Developed an LLM-based retrieval workflow that classifies questions, generates multiple queries, and uses multithreading for parallel semantic search.
- Built an evidence-grounded response generation pipeline where the assistant LLM combines user questions, retrieved context, and conversation history to generate Markdown responses with supporting evidence.
- Currently developing the frontend interface.

AskMentor — Full Stack Discussion Forum

React, JavaScript, Express, Node.js, MySQL, Docker, Git

- Built a full-stack discussion platform where users can create channels, publish posts with nested replies, send direct messages, manage profiles, and upload files.
- Developed the React frontend using React Router, Axios, and React Hooks with protected routes, session-based authentication, and dynamic interfaces for channels, messages and user profile.
- Designed the MySQL relational database architecture while using recursive SQL CTEs to retrieve threaded discussions and handle reply hierarchies.
- Developed backend with Node.js/Express REST APIs and integrated Docker Compose to run backend and database services in separate containers.

Data Predictify — Machine Learning Prediction Platform

Python, Pandas, Scikit-learn, Matplotlib, Seaborn, Django

- Developed a Django-based machine learning application for diagnosis prediction through an interactive workflow.
- Built a preprocessing pipeline using Pandas and Scikit-learn to handle missing values, remove unsuitable features, encode categorical data, and preserve transformation mappings for consistent prediction inputs.
- Successfully engineered an exploratory analysis workflow that calculates feature correlations and dynamically generates visualizations using Django, AJAX, Matplotlib, and Seaborn without page reloads.
- Implemented a model evaluation pipeline comparing Logistic Regression, Support Vector Machines, Decision Trees, and K-Nearest Neighbors using StandardScaler and GridSearchCV for feature scaling & hyperparameter optimization.

EXPERIENCE

IT Support - University of Saskatchewan

Jan 2025 – June 2026

- Provided technical support to clients by troubleshooting software, hardware, account, and network connectivity issues.
- Assisted users with device setup, system configuration, installation of applications, and resolution of account issues.
- Managed support requests using TeamDynamix, administered user devices and accounts through Active Directory, tracked hardware assets using Lansweeper, and used BeyondTrust for remote troubleshooting and support.

TECHNICAL SKILLS

Programming Languages: Python, C, JavaScript, SQL, HTML, CSS

Frameworks , Libraries and Tools: React.js, Node.js, Express.js, Django, FastAPI, LangChain, Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib, MySQL, ChromaDB, OpenAI API, Git, Docker, Linux, Figma
